The First Science Fictions—Afterword by Paul Cook  201
EDGAR ALLAN POE (1809-1849), born in Massachusetts, grew up in Virginia, eventually attending the University of Virginia. After a brief attempt at a military career Poe turned to journalism and writing where he was able to make a living. Though he was alcoholic and probably a chronic depressive (and not ever in the best of health), he was able to became a major figure in the American Romantic movement, writing poetry, short stories, literary criticism, and various kinds of essays which still remain influential. Poe is credited with inventing the short story as well as writing the first American science fiction stories. He also wrote what might be the very first recognizable detective story. His focus was always on the darkly psychological aspects of the human mind and the lengths to which humans, at the edge of madness, can go.
O

course I shall not pretend to consider it any matter for won-
der, that the extraordinary case of M. Valdemar has excited
discussion. It would have been a miracle had it not—es-

pecially under the circumstances. Through the desire of all par-
ties concerned, to keep the affair from the public, at least for the
present, or until we had farther opportunities for investigation—
through our endeavors to effect this—a garbled or exaggerated ac-
count made its way into society, and became the source of many
unpleasant misrepresentations; and, very naturally, of a great deal
of disbelief.

It is now rendered necessary that I give the facts—as far as I
comprehend them myself. They are, succinctly, these:

My attention, for the last three years, had been repeatedly
drawn to the subject of Mesmerism; and, about nine months ago,
it occurred to me, quite suddenly, that in the series of experiments
made hitherto, there had been a very remarkable and most unac-
countable omission:—no person had as yet been mesmerized in
articolo mortis. It remained to be seen, first, whether, in such condi-
tion, there existed in the patient any susceptibility to the magnetic
influence; secondly, whether, if any existed, it was impaired or in-
creased by the condition; thirdly, to what extent, or for how long
a period, the encroachments of Death might be arrested by the
process. There were other points to be ascertained, but these most
excited my curiosity—the last in especial, from the immensely im-
portant character of its consequences.

In looking around me for some subject by whose means I might
test these particulars, I was brought to think of my friend, M. Ernest
Valdemar, the well-known compiler of the “Bibliotheca Forensica,”
and author (under the nom de plume of Issachar Marx) of the Polish
versions of “Wallenstein” and “Gargantua.” M. Valdemar, who has
resided principally at Harlem, N. Y., since the year 1839, is (or was) particularly noticeable for the extreme sparseness of his person—his lower limbs much resembling those of John Randolph; and, also, for the whiteness of his whiskers, in violent contrast to the blackness of his hair—the latter, in consequence, being very generally mistaken for a wig. His temperament was markedly nervous, and rendered him a good subject for mesmeric experiment. On two or three occasions I had put him to sleep with little difficulty, but was disappointed in other results which his peculiar constitution had naturally led me to anticipate. His will was at no period positively, or thoroughly, under my control, and in regard to clairvoyance, I could accomplish with him nothing to be relied upon. I always attributed my failure at these points to the disordered state of his health. For some months previous to my becoming acquainted with him, his physicians had declared him in a confirmed phthisis. It was his custom, indeed, to speak calmly of his approaching dissolution, as of a matter neither to be avoided nor regretted.

When the ideas to which I have alluded first occurred to me, it was of course very natural that I should think of M. Valdemar. I knew the steady philosophy of the man too well to apprehend any scruples from him; and he had no relatives in America who would be likely to interfere. I spoke to him frankly upon the subject; and, to my surprise, his interest seemed vividly excited. I say to my surprise; for, although he had always yielded his person freely to my experiments, he had never before given me any tokens of sympathy with what I did. His disease was of that character which would admit of exact calculation in respect to the epoch of its termination in death; and it was finally arranged between us that he would send for me about twenty-four hours before the period announced by his physicians as that of his decease.

It is now rather more than seven months since I received, from M. Valdemar himself, the subjoined note:

"MY DEAR P——,

"You may as well come now. D——and F——are agreed that I cannot hold out beyond to-morrow midnight; and I think they have hit the time very nearly.

"Valdemar."

I received this note within half an hour after it was written, and in fifteen minutes more I was in the dying man’s chamber. I had not seen him for ten days, and was appalled by the fearful alteration which the brief interval had wrought in him. His face
wore a leaden hue; the eyes were utterly lustreless; and the emaciation was so extreme, that the skin had been broken through by the cheek-bones. His expectoration was excessive. The pulse was barely perceptible. He retained, nevertheless, in a very remarkable manner, both his mental power and a certain degree of physical strength. He spoke with distinctness— took some palliative medicines without aid—and, when I entered the room, was occupied in penciling memoranda in a pocket-book. He was propped up in the bed by pillows. Doctors D—— and F—— were in attendance.

After pressing Valdemar’s hand, I took these gentlemen aside, and obtained from them a minute account of the patient’s condition. The left lung had been for eighteen months in a semi-osseous or cartilaginous state, and was, of course, entirely useless for all purposes of vitality. The right, in its upper portion, was also partially, if not thoroughly, ossified, while the lower region was merely a mass of purulent tubercles, running one into another. Several extensive perforations existed; and, at one point, permanent adhesion to the ribs had taken place. These appearances in the right lobe were of comparatively recent date. The ossification had proceeded with very unusual rapidity; no sign of it had been discovered a month before, and the adhesion had only been observed during the three previous days. Independently of the phthisis, the patient was suspected of aneurism of the aorta; but on this point the osseous symptoms rendered an exact diagnosis impossible. It was the opinion of both physicians that M. Valdemar would die about midnight on the morrow (Sunday.) It was then seven o’clock on Saturday evening.

On quitting the invalid’s bed-side to hold conversation with myself, Doctors D—— and F—— had bidden him a final farewell. It had not been their intention to return; but, at my request, they agreed to look in upon the patient about ten the next night.

When they had gone, I spoke freely with M. Valdemar on the subject of his approaching dissolution, as well as, more particularly, of the experiment proposed. He still professed himself quite willing and even anxious to have it made, and urged me to commence it at once. A male and a female nurse were in attendance; but I did not feel myself altogether at liberty to engage in a task of this character with no more reliable witnesses than these people, in case of sudden accident, might prove. I therefore postponed operations until about eight the next night, when the arrival of a medical student, with whom I had some acquaintance, (Mr. Theodore L———1,) relieved me from farther embarrassment. It had been my design, originally, to wait for the physicians; but I was induced to proceed, first, by the
urgent entreaties of M. Valdemar, and secondly, by my conviction that I had not a moment to lose, as he was evidently sinking fast.

Mr. L——I was so kind as to accede to my desire that he would take notes of all that occurred; and it is from his memoranda that what I now have to relate is, for the most part, either condensed or copied verbatim.

It wanted about five minutes of eight when, taking the patient’s hand, I begged him to state, as distinctly as he could, to Mr. L——I, whether he (M. Valdemar,) was entirely willing that I should make the experiment of mesmerizing him in his then condition.

He replied feebly, yet quite audibly, “Yes, I wish to be mesmerized”—adding immediately afterwards, “I fear you have deferred it too long.”

While he spoke thus, I commenced the passes which I had already found most effectual in subduing him. He was evidently influenced with the first lateral stroke of my hand across his forehead; but although I exerted all my powers, no farther perceptible effect was induced until some minutes after ten o’clock, when Doctors D——and F——called, according to appointment. I explained to them, in a few words, what I designed, and as they opposed no objection, saying that the patient was already in the death agony, I proceeded without hesitation—exchanging, however, the lateral passes for downward ones, and directing my gaze entirely into the right eye of the sufferer.

By this time his pulse was imperceptible and his breathing was stertorous [stertorous], and at intervals of half a minute.

This condition was nearly unaltered for a quarter of an hour. At the expiration of this period, however, a natural although a very deep sigh escaped the bosom of the dying man, and the stertorous [stertorous] breathing ceased—that is to say, its stertorousness [stertorousness] was no longer apparent; the intervals were undiminished. The patient’s extremities were of an icy coldness.

At five minutes before eleven, I perceived unequivocal signs of the mesmeric influence. The glassy roll of the eye was changed for that expression of uneasy inward examination which is never seen except in cases of sleep-waking, and which it is quite impossible to mistake. With a few rapid lateral passes I made the lids quiver, as in incipient sleep, and with a few more I closed them altogether. I was not satisfied, however, with this, but continued the manipulations vigorously, and with the fullest exertion of the will, until I had completely stiffened the limbs of the slumberer, after placing them in a seemingly easy position. The legs were at full length; the arms
were nearly so, and reposed on the bed at a moderate distance from the loins. The head was very slightly elevated.

When I had accomplished this, it was fully midnight, and I requested the gentlemen present to examine M. Valdemar’s condition. After a few experiments, they admitted him to be in an unusually perfect state of mesmeric trance. The curiosity of both the physicians was greatly excited. Dr. D——resolved at once to remain with the patient all night, while Dr. F——took leave with a promise to return at daybreak. Mr. L——l and the nurses remained.

We left M. Valdemar entirely undisturbed until about three o’clock in the morning, when I approached him and found him in precisely the same condition as when Dr. F——went away—that is to say, he lay in the same position; the pulse was imperceptible; the breathing was gentle (scarcely noticeable, unless through the application of a mirror to the lips;) the eyes were closed naturally; and the limbs were as rigid and as cold as marble. Still, the general appearance was certainly not that of death.

As I approached M. Valdemar I made a kind of half effort to influence his right arm into pursuit of my own, as I passed the latter gently to and fro above his person. In such experiments with this patient, I had never perfectly succeeded before, and assuredly I had little thought of succeeding now; but to my astonishment, his arm very readily, although feebly, followed every direction I assigned it with mine. I determined to hazard a few words of conversation.

“M. Valdemar,” I said, “are you asleep?” He made no answer, but I perceived a tremor about the lips, and was thus induced to repeat the question, again and again. At its third repetition, his whole frame was agitated by a very slight shivering; the eye-lids unclosed themselves so far as to display a white line of a ball; the lips moved sluggishly, and from between them, in a barely audible whisper, issued the words:

“Yes;—asleep now. Do not wake me!—let me die so!”

I here felt the limbs and found them as rigid as ever. The right arm, as before, obeyed the direction of my hand. I questioned the sleep-waker again:

“Do you still feel pain in the breast, M. Valdemar?”

The answer now was immediate, but even less audible than before:

“No pain—I am dying.”

I did not think it advisable to disturb him farther just then, and nothing more was said or done until the arrival of Dr. F——, who came a little before sunrise, and expressed unbounded astonish-
ment at finding the patient still alive. After feeling the pulse and applying a mirror to the lips, he requested me to speak to the sleep-waker again. I did so, saying:

“M. Valdemar, do you still sleep?”

As before, some minutes elapsed ere a reply was made; and during the interval the dying man seemed to be collecting his energies to speak. At my fourth repetition of the question, he said very faintly, almost inaudibly:

“Yes; still asleep—dying.”

It was now the opinion, or rather the wish, of the physicians, that M. Valdemar should be suffered to remain undisturbed in his present apparently tranquil condition, until death should supervene—and this, it was generally agreed, must now take place within a few minutes. I concluded, however, to speak to him once more, and merely repeated my previous question.

While I spoke, there came a marked change over the countenance of the sleep-waker. The eyes rolled themselves slowly open, the pupils disappearing upwardly; the skin generally assumed a cadaverous hue, resembling not so much parchment as white paper; and the circular hectic spots which, hitherto, had been strongly defined in the centre of each cheek, went out at once. I use this expression, because the suddenness of their departure put me in mind of nothing so much as the extinguishment of a candle by a puff of the breath. The upper lip, at the same time, writhed itself away from the teeth, which it had previously covered completely; while the lower jaw fell with an audible jerk, leaving the mouth widely extended, and disclosing in full view the swollen and blackened tongue. I presume that no member of the party then present had been unaccustomed to death-bed horrors; but so hideous beyond conception was the appearance of M. Valdemar at this moment, that there was a general shrinking back from the region of the bed.

I now feel that I have reached a point of this narrative at which every reader will be startled into positive disbelief. It is my business, however, simply to proceed.

There was no longer the faintest sign of vitality in M. Valdemar; and concluding him to be dead, we were consigning him to the charge of the nurses, when a strong vibratory motion was observable in the tongue. This continued for perhaps a minute. At the expiration of this period, there issued from the distended and motionless jaws a voice—such as it would be madness in me to attempt describing. There are, indeed, two or three epithets which might be considered as applicable to it in part; I might say, for example,
that the sound was harsh, and broken and hollow; but the hideous whole is indescribable, for the simple reason that no similar sounds have ever jarred upon the ear of humanity. There were two particulars, nevertheless, which I thought then, and still think, might fairly be stated as characteristic of the intonation—as well adapted to convey some idea of its unearthly peculiarity. In the first place, the voice seemed to reach our ears—at least mine—from a vast distance, or from some deep cavern within the earth. In the second place, it impressed me (I fear, indeed, that it will be impossible to make myself comprehended) as gelatinous or glutinous matters impress the sense of touch.

I have spoken both of “sound” and of “voice.” I mean to say that the sound was one of distinct—of even wonderfully, thrillingly distinct—syllabification. M. Valdemar spoke—obviously in reply to the question I had propounded to him a few minutes before. I had asked him, it will be remembered, if he still slept. He now said:

“Yes;—no;—I have been sleeping—and now—now—I am dead.”

No person present even affected to deny, or attempted to repress, the unutterable, shuddering horror which these few words, thus uttered, were so well calculated to convey. Mr. L——l (the student) swooned. The nurses immediately left the chamber, and could not be induced to return. My own impressions I would not pretend to render intelligible to the reader. For nearly an hour, we busied ourselves, silently—without the utterance of a word—in endeavors to revive Mr. L——l. When he came to himself, we addressed ourselves again to an investigation of M. Valdemar’s condition.

It remained in all respects as I have last described it, with the exception that the mirror no longer afforded evidence of respiration. An attempt to draw blood from the arm failed. I should mention, too, that this limb was no farther subject to my will. I endeavored in vain to make it follow the direction of my hand. The only real indication, indeed, of the mesmeric influence, was now found in the vibratory movement of the tongue, whenever I addressed M. Valdemar a question. He seemed to be making an effort to reply, but had no longer sufficient volition. To queries put to him by any other person than myself he seemed utterly insensible—although I endeavored to place each member of the company in mesmeric rapport with him. I believe that I have now related all that is necessary to an understanding of the sleep-waker’s state at this epoch. Other nurses were procured; and at ten o’clock I left the house in company with the two physicians and Mr. L——l.
In the afternoon we all called again to see the patient. His condition remained precisely the same. We had now some discussion as to the propriety and feasibility of awakening him; but we had little difficulty in agreeing that no good purpose would be served by so doing. It was evident that, so far, death (or what is usually termed death) had been arrested by the mesmeric process. It seemed clear to us all that to awaken M. Valdemar would be merely to insure his instant, or at least his speedy dissolution.

From this period until the close of last week—an interval of nearly seven months—we continued to make daily calls at M. Valdemar’s house, accompanied, now and then, by medical and other friends. All this time the sleeper-waker remained exactly as I have last described him. The nurses’ attentions were continual.

It was on Friday last that we finally resolved to make the experiment of awakening, or attempting to awaken him; and it is the (perhaps) unfortunate result of this latter experiment which has given rise to so much discussion in private circles—to so much of what I cannot help thinking unwarranted popular feeling.

For the purpose of relieving M. Valdemar from the mesmeric trance, I made use of the customary passes. These, for a time, were unsuccessful. The first indication of revival was afforded by a partial descent of the iris. It was observed, as especially remarkable, that this lowering of the pupil was accompanied by the profuse out-flowing of a yellowish ichor (from beneath the lids) of a pungent and highly offensive odor.

It was now suggested that I should attempt to influence the patient’s arm, as heretofore. I made the attempt and failed. Dr. F——then intimated a desire to have me put a question. I did so, as follows:

“M. Valdemar, can you explain to us what are your feelings or wishes now?”

There was an instant return of the hectic circles on the cheeks; the tongue quivered, or rather rolled violently in the mouth (although the jaws and lips remained rigid as before;) and at length the same hideous voice which I have already described, broke forth:

“For God’s sake!—quick!—quick!—put me to sleep—or, quick!—waken me!—quick!—I say to you that I am dead!”

I was thoroughly unnerved, and for an instant remained undecided what to do. At first I made an endeavor to re-compose the patient; but, failing in this through total abeyance of the will, I retraced my steps and as earnestly struggled to awaken him. In this attempt I soon saw that I should be successful—or at least I soon
fancied that my success would be complete—and I am sure that all
in the room were prepared to see the patient awaken.

For what really occurred, however, it is quite impossible that
any human being could have been prepared.

As I rapidly made the mesmeric passes, amid ejaculations of
“dead! dead!” absolutely bursting from the tongue and not from the
lips of the sufferer, his whole frame at once—within the space of a
single minute, or even less, shrunk—crumbled—absolutely rotted
away beneath my hands. Upon the bed, before that whole com-
pany, there lay a nearly liquid mass of loathsome—of detestable
putrescence.

Note:
Griswold was either unaware, or chose not to use, Poe’s manuscript
correction which made the last sentence end “. . . of detestable pu-
tridity.” This change was made in the copy of the Broadway Journal
Poe gave to Mrs. Whitman, a copy which Griswold presumably did
not see in the preparation of his edition of Poe’s works.
NATHANIEL HAWTHORNE (1804-1864), born in Massachusetts, was an early major figure in American literature. He was a member of the New England Renaissance (along with Emerson, Thoreau, and Bronson Alcott) and was life-long critic in his writings of the Puritan experience in New England. His fictional deacons, doctors, chemists, botanists, mesmerists and inventors usually had a destructive bent (as in “The Birthmark”) and their actions often resulted in tragedy. Hawthorne’s most enduring masterpiece is The Scarlet Letter and his stories and novels form the bedrock of American writing in the 19th century and continue to be popular to this day.
In the latter part of the last century there lived a man of science, an eminent proficient in every branch of natural philosophy, who not long before our story opens had made experience of a spiritual affinity more attractive than any chemical one. He had left his laboratory to the care of an assistant, cleared his fine countenance from the furnace smoke, washed the stain of acids from his fingers, and persuaded a beautiful woman to become his wife. In those days when the comparatively recent discovery of electricity and other kindred mysteries of Nature seemed to open paths into the region of miracle, it was not unusual for the love of science to rival the love of woman in its depth and absorbing energy. The higher intellect, the imagination, the spirit, and even the heart might all find their congenial aliment in pursuits which, as some of their ardent votaries believed, would ascend from one step of powerful intelligence to another, until the philosopher should lay his hand on the secret of creative force and perhaps make new worlds for himself. We know not whether Aylmer possessed this degree of faith in man's ultimate control over Nature. He had devoted himself, however, too unreservedly to scientific studies ever to be weaned from them by any second passion. His love for his young wife might prove the stronger of the two; but it could only be by intertwining itself with his love of science, and uniting the strength of the latter to his own.

Such a union accordingly took place, and was attended with truly remarkable consequences and a deeply impressive moral. One day, very soon after their marriage, Aylmer sat gazing at his wife with a trouble in his countenance that grew stronger until he spoke.

“Georgiana,” said he, “has it never occurred to you that the mark upon your cheek might be removed?”
“No, indeed,” said she, smiling; but perceiving the seriousness of his manner, she blushed deeply. “To tell you the truth it has been so often called a charm that I was simple enough to imagine it might be so.”

“Ah, upon another face perhaps it might,” replied her husband; “but never on yours. No, dearest Georgiana, you came so nearly perfect from the hand of Nature that this slightest possible defect, which we hesitate whether to term a defect or a beauty, shocks me, as being the visible mark of earthly imperfection.”

“Shocks you, my husband!” cried Georgiana, deeply hurt; at first reddening with momentary anger, but then bursting into tears. “Then why did you take me from my mother’s side? You cannot love what shocks you!”

To explain this conversation it must be mentioned that in the centre of Georgiana’s left cheek there was a singular mark, deeply interwoven, as it were, with the texture and substance of her face. In the usual state of her complexion—a healthy though delicate bloom—the mark wore a tint of deeper crimson, which imperfectly defined its shape amid the surrounding rosiness. When she blushed it gradually became more indistinct, and finally vanished amid the triumphant rush of blood that bathed the whole cheek with its brilliant glow. But if any shifting motion caused her to turn pale there was the mark again, a crimson stain upon the snow, in what Aylmer sometimes deemed an almost fearful distinctness. Its shape bore not a little similarity to the human hand, though of the smallest pygmy size. Georgiana’s lovers were wont to say that some fairy at her birth hour had laid her tiny hand upon the infant’s cheek, and left this impress there in token of the magic endowments that were to give her such sway over all hearts. Many a desperate swain would have risked life for the privilege of pressing his lips to the mysterious hand. It must not be concealed, however, that the impression wrought by this fairy sign manual varied exceedingly, according to the difference of temperament in the beholders. Some fastidious persons—but they were exclusively of her own sex—affirmed that the bloody hand, as they chose to call it, quite destroyed the effect of Georgiana’s beauty, and rendered her countenance even hideous. But it would be as reasonable to say that one of those small blue stains which sometimes occur in the purest statuary marble would convert the Eve of Powers to a monster. Masculine observers, if the birthmark did not heighten their admiration, contented themselves with wishing it away, that the world might possess one living specimen of ideal loveliness without the semblance of a flaw. After his
marriage,—for he thought little or nothing of the matter before,—Aylmer discovered that this was the case with himself.

Had she been less beautiful,—if Envy’s self could have found aught else to sneer at,—he might have felt his affection heightened by the prettiness of this mimic hand, now vaguely portrayed, now lost, now stealing forth again and glimmering to and fro with every pulse of emotion that throbbed within her heart; but seeing her otherwise so perfect, he found this one defect grow more and more intolerable with every moment of their united lives. It was the fatal flaw of humanity which Nature, in one shape or another, stamps ineffaceably on all her productions, either to imply that they are temporary and finite, or that their perfection must be wrought by toil and pain. The crimson hand expressed the ineludible gripe in which mortality clutches the highest and purest of earthly mould, degrading them into kindred with the lowest, and even with the very brutes, like whom their visible frames return to dust. In this manner, selecting it as the symbol of his wife’s liability to sin, sorrow, decay, and death, Aylmer’s sombre imagination was not long in rendering the birthmark a frightful object, causing him more trouble and horror than ever Georgiana’s beauty, whether of soul or sense, had given him delight.

At all the seasons which should have been their happiest, he invariably and without intending it, nay, in spite of a purpose to the contrary, reverted to this one disastrous topic. Trifling as it at first appeared, it so connected itself with innumerable trains of thought and modes of feeling that it became the central point of all. With the morning twilight Aylmer opened his eyes upon his wife’s face and recognized the symbol of imperfection; and when they sat together at the evening hearth his eyes wandered stealthily to her cheek, and beheld, flickering with the blaze of the wood fire, the spectral hand that wrote mortality where he would fain have worshipped. Georgiana soon learned to shudder at his gaze. It needed but a glance with the peculiar expression that his face often wore to change the roses of her cheek into a deathlike paleness, amid which the crimson hand was brought strongly out, like a bass-relief of ruby on the whitest marble.

Late one night when the lights were growing dim, so as hardly to betray the stain on the poor wife’s cheek, she herself, for the first time, voluntarily took up the subject.

“Do you remember, my dear Aylmer,” said she, with a feeble attempt at a smile, “have you any recollection of a dream last night about this odious hand?”
“None! none whatever!” replied Aylmer, starting; but then he added, in a dry, cold tone, affected for the sake of concealing the real depth of his emotion, “I might well dream of it; for before I fell asleep it had taken a pretty firm hold of my fancy.”

“And you did dream of it?” continued Georgiana, hastily; for she dreaded lest a gush of tears should interrupt what she had to say. “A terrible dream! I wonder that you can forget it. Is it possible to forget this one expression?—’It is in her heart now; we must have it out!’ Reflect, my husband; for by all means I would have you recall that dream.”

The mind is in a sad state when Sleep, the all-involving, cannot confine her spectres within the dim region of her sway, but suffers them to break forth, affrighting this actual life with secrets that perchance belong to a deeper one. Aylmer now remembered his dream. He had fancied himself with his servant Aminadab, attempting an operation for the removal of the birthmark; but the deeper went the knife, the deeper sank the hand, until at length its tiny grasp appeared to have caught hold of Georgiana’s heart; whence, however, her husband was inexorably resolved to cut or wrench it away.

When the dream had shaped itself perfectly in his memory, Aylmer sat in his wife’s presence with a guilty feeling. Truth often finds its way to the mind close muffled in robes of sleep, and then speaks with uncompromising directness of matters in regard to which we practise an unconscious self-deception during our waking moments. Until now he had not been aware of the tyrannizing influence acquired by one idea over his mind, and of the lengths which he might find in his heart to go for the sake of giving himself peace.

“Aylmer,” resumed Georgiana, solemnly, “I know not what may be the cost to both of us to rid me of this fatal birthmark. Perhaps its removal may cause cureless deformity; or it may be the stain goes as deep as life itself. Again: do we know that there is a possibility, on any terms, of unclasping the firm gripe of this little hand which was laid upon me before I came into the world?”

“Dearest Georgiana, I have spent much thought upon the subject,” hastily interrupted Aylmer. “I am convinced of the perfect practicability of its removal.”

“If there be the remotest possibility of it,” continued Georgiana, “let the attempt be made at whatever risk. Danger is nothing to me; for life, while this hateful mark makes me the object of your horror and disgust,—life is a burden which I would fling down with
joy. Either remove this dreadful hand, or take my wretched life! You have deep science. All the world bears witness of it. You have achieved great wonders. Cannot you remove this little, little mark, which I cover with the tips of two small fingers? Is this beyond your power, for the sake of your own peace, and to save your poor wife from madness?"

“Noblest, dearest, tenderest wife,” cried Aylmer, rapturously, “doubt not my power. I have already given this matter the deepest thought—thought which might almost have enlightened me to create a being less perfect than yourself. Georgiana, you have led me deeper than ever into the heart of science. I feel myself fully competent to render this dear cheek as faultless as its fellow; and then, most beloved, what will be my triumph when I shall have corrected what Nature left imperfect in her fairest work! Even Pygmalion, when his sculptured woman assumed life, felt not greater ecstasy than mine will be.”

“It is resolved, then,” said Georgiana, faintly smiling. “And, Aylmer, spare me not, though you should find the birthmark take refuge in my heart at last.”

Her husband tenderly kissed her cheek—her right cheek—not that which bore the impress of the crimson hand.

The next day Aylmer apprised his wife of a plan that he had formed whereby he might have opportunity for the intense thought and constant watchfulness which the proposed operation would require; while Georgiana, likewise, would enjoy the perfect repose essential to its success. They were to seclude themselves in the extensive apartments occupied by Aylmer as a laboratory, and where, during his toilsome youth, he had made discoveries in the elemental powers of Nature that had roused the admiration of all the learned societies in Europe. Seated calmly in this laboratory, the pale philosopher had investigated the secrets of the highest cloud region and of the profoundest mines; he had satisfied himself of the causes that kindled and kept alive the fires of the volcano; and had explained the mystery of fountains, and how it is that they gush forth, some so bright and pure, and others with such rich medicinal virtues, from the dark bosom of the earth. Here, too, at an earlier period, he had studied the wonders of the human frame, and attempted to fathom the very process by which Nature assimilates all her precious influences from earth and air, and from the spiritual world, to create and foster man, her masterpiece. The latter pursuit, however, Aylmer had long laid aside in unwilling recognition of the truth—against which all seekers sooner or later stumble—that
our great creative Mother, while she amuses us with apparently working in the broadest sunshine, is yet severely careful to keep her own secrets, and, in spite of her pretended openness, shows us nothing but results. She permits us, indeed, to mar, but seldom to mend, and, like a jealous patentee, on no account to make. Now, however, Aylmer resumed these half-forgotten investigations; not, of course, with such hopes or wishes as first suggested them; but because they involved much physiological truth and lay in the path of his proposed scheme for the treatment of Georgiana.

As he led her over the threshold of the laboratory, Georgiana was cold and tremulous. Aylmer looked cheerfully into her face, with intent to reassure her, but was so startled with the intense glow of the birthmark upon the whiteness of her cheek that he could not restrain a strong convulsive shudder. His wife fainted.

“Aminadab! Aminadab!” shouted Aylmer, stamping violently on the floor.

Forthwith there issued from an inner apartment a man of low stature, but bulky frame, with shaggy hair hanging about his visage, which was grimed with the vapors of the furnace. This personage had been Aylmer’s underworker during his whole scientific career, and was admirably fitted for that office by his great mechanical readiness, and the skill with which, while incapable of comprehending a single principle, he executed all the details of his master’s experiments. With his vast strength, his shaggy hair, his smoky aspect, and the indescribable earthiness that incrusted him, he seemed to represent man’s physical nature; while Aylmer’s slender figure, and pale, intellectual face, were no less apt a type of the spiritual element.

“Throw open the door of the boudoir, Aminadab,” said Aylmer, “and burn a pastil.”

“Yes, master,” answered Aminadab, looking intently at the lifeless form of Georgiana; and then he muttered to himself, “If she were my wife, I’d never part with that birthmark.”

When Georgiana recovered consciousness she found herself breathing an atmosphere of penetrating fragrance, the gentle potency of which had recalled her from her deathlike faintness. The scene around her looked like enchantment. Aylmer had converted those smoky, dingy, sombre rooms, where he had spent his brightest years in recondite pursuits, into a series of beautiful apartments not unfit to be the secluded abode of a lovely woman. The walls were hung with gorgeous curtains, which imparted the combination of grandeur and grace that no other species of adornment can
achieve; and as they fell from the ceiling to the floor, their rich and ponderous folds, concealing all angles and straight lines, appeared to shut in the scene from infinite space. For aught Georgiana knew, it might be a pavilion among the clouds. And Aylmer, excluding the sunshine, which would have interfered with his chemical processes, had supplied its place with perfumed lamps, emitting flames of various hue, but all uniting in a soft, impurpled radiance. He now knelt by his wife’s side, watching her earnestly, but without alarm; for he was confident in his science, and felt that he could draw a magic circle round her within which no evil might intrude.

“Where am I? Ah, I remember,” said Georgiana, faintly; and she placed her hand over her cheek to hide the terrible mark from her husband’s eyes.

“Fear not, dearest!” exclaimed he. “Do not shrink from me! Believe me, Georgiana, I even rejoice in this single imperfection, since it will be such a rapture to remove it.”

“Oh, spare me!” sadly replied his wife. “Pray do not look at it again. I never can forget that convulsive shudder.”

In order to soothe Georgiana, and, as it were, to release her mind from the burden of actual things, Aylmer now put in practice some of the light and playful secrets which science had taught him among its profounder lore. Airy figures, absolutely bodiless ideas, and forms of unsubstantial beauty came and danced before her, imprinting their momentary footsteps on beams of light. Though she had some indistinct idea of the method of these optical phenomena, still the illusion was almost perfect enough to warrant the belief that her husband possessed sway over the spiritual world. Then again, when she felt a wish to look forth from her seclusion, immediately, as if her thoughts were answered, the procession of external existence flitted across a screen. The scenery and the figures of actual life were perfectly represented, but with that bewitching, yet indescribable difference which always makes a picture, an image, or a shadow so much more attractive than the original. When wearied of this, Aylmer bade her cast her eyes upon a vessel containing a quantity of earth. She did so, with little interest at first; but was soon startled to perceive the germ of a plant shooting upward from the soil. Then came the slender stalk; the leaves gradually unfolded themselves; and amid them was a perfect and lovely flower.

“It is magical!” cried Georgiana. “I dare not touch it.”

“Nay, pluck it,” answered Aylmer,—”pluck it, and inhale its brief perfume while you may. The flower will wither in a few moments
and leave nothing save its brown seed vessels; but thence may be perpetuated a race as ephemeral as itself."

But Georgiana had no sooner touched the flower than the whole plant suffered a blight, its leaves turning coal-black as if by the agency of fire.

"There was too powerful a stimulus," said Aylmer, thoughtfully.

To make up for this abortive experiment, he proposed to take her portrait by a scientific process of his own invention. It was to be effected by rays of light striking upon a polished plate of metal. Georgiana assented; but, on looking at the result, was affrighted to find the features of the portrait blurred and indefinable; while the minute figure of a hand appeared where the cheek should have been. Aylmer snatched the metallic plate and threw it into a jar of corrosive acid.

Soon, however, he forgot these mortifying failures. In the intervals of study and chemical experiment he came to her flushed and exhausted, but seemed invigorated by her presence, and spoke in glowing language of the resources of his art. He gave a history of the long dynasty of the alchemists, who spent so many ages in quest of the universal solvent by which the golden principle might be elicited from all things vile and base. Aylmer appeared to believe that, by the plainest scientific logic, it was altogether within the limits of possibility to discover this long-sought medium; "but," he added, "a philosopher who should go deep enough to acquire the power would attain too lofty a wisdom to stoop to the exercise of it." Not less singular were his opinions in regard to the elixir vitae. He more than intimated that it was at his option to concoct a liquid that should prolong life for years, perhaps interminably; but that it would produce a discord in Nature which all the world, and chiefly the quaffer of the immortal nostrum, would find cause to curse.

"Aylmer, are you in earnest?" asked Georgiana, looking at him with amazement and fear. "It is terrible to possess such power, or even to dream of possessing it."

"Oh, do not tremble, my love," said her husband. "I would not wrong either you or myself by working such inharmonious effects upon our lives; but I would have you consider how trifling, in comparison, is the skill requisite to remove this little hand."

At the mention of the birthmark, Georgiana, as usual, shrank as if a redhot iron had touched her cheek.

Again Aylmer applied himself to his labors. She could hear his voice in the distant furnace room giving directions to Aminadab, whose harsh, uncouth, misshapen tones were audible in response,
more like the grunt or growl of a brute than human speech. After hours of absence, Aylmer reappeared and proposed that she should now examine his cabinet of chemical products and natural treasures of the earth. Among the former he showed her a small vial, in which, he remarked, was contained a gentle yet most powerful fragrance, capable of impregnating all the breezes that blow across a kingdom. They were of inestimable value, the contents of that little vial; and, as he said so, he threw some of the perfume into the air and filled the room with piercing and invigorating delight.

“And what is this?” asked Georgiana, pointing to a small crystal globe containing a gold-colored liquid. “It is so beautiful to the eye that I could imagine it the elixir of life.”

“In one sense it is,” replied Aylmer; “or, rather, the elixir of immortality. It is the most precious poison that ever was concocted in this world. By its aid I could apportion the lifetime of any mortal at whom you might point your finger. The strength of the dose would determine whether he were to linger out years, or drop dead in the midst of a breath. No king on his guarded throne could keep his life if I, in my private station, should deem that the welfare of millions justified me in depriving him of it.”

“Why do you keep such a terrific drug?” inquired Georgiana in horror.

“Do not mistrust me, dearest,” said her husband, smiling; “its virtuous potency is yet greater than its harmful one. But see! here is a powerful cosmetic. With a few drops of this in a vase of water, freckles may be washed away as easily as the hands are cleansed. A stronger infusion would take the blood out of the cheek, and leave the rosiest beauty a pale ghost.”

“Is it with this lotion that you intend to bathe my cheek?” asked Georgiana, anxiously.

“Oh, no,” hastily replied her husband; “this is merely superficial. Your case demands a remedy that shall go deeper.”

In his interviews with Georgiana, Aylmer generally made minute inquiries as to her sensations and whether the confinement of the rooms and the temperature of the atmosphere agreed with her. These questions had such a particular drift that Georgiana began to conjecture that she was already subjected to certain physical influences, either breathed in with the fragrant air or taken with her food. She fancied likewise, but it might be altogether fancy, that there was a stirring up of her system—a strange, indefinite sensation creeping through her veins, and tingling, half painfully, half pleasurably, at her heart. Still, whenever she dared to look into the
mirror, there she beheld herself pale as a white rose and with the crimson birthmark stamped upon her cheek. Not even Aylmer now hated it so much as she.

To dispel the tedium of the hours which her husband found it necessary to devote to the processes of combination and analysis, Georgiana turned over the volumes of his scientific library. In many dark old tomes she met with chapters full of romance and poetry. They were the works of philosophers of the middle ages, such as Albertus Magnus, Cornelius Agrippa, Paracelsus, and the famous friar who created the prophetic Brazen Head. All these antique naturalists stood in advance of their centuries, yet were imbued with some of their credulity, and therefore were believed, and perhaps imagined themselves to have acquired from the investigation of Nature a power above Nature, and from physics a sway over the spiritual world. Hardly less curious and imaginative were the early volumes of the Transactions of the Royal Society, in which the members, knowing little of the limits of natural possibility, were continually recording wonders or proposing methods whereby wonders might be wrought.

But to Georgiana the most engrossing volume was a large folio from her husband’s own hand, in which he had recorded every experiment of his scientific career, its original aim, the methods adopted for its development, and its final success or failure, with the circumstances to which either event was attributable. The book, in truth, was both the history and emblem of his ardent, ambitious, imaginative, yet practical and laborious life. He handled physical details as if there were nothing beyond them; yet spiritualized them all, and redeemed himself from materialism by his strong and eager aspiration towards the infinite. In his grasp the veriest clod of earth assumed a soul. Georgiana, as she read, reverenced Aylmer and loved him more profoundly than ever, but with a less entire dependence on his judgment than heretofore. Much as he had accomplished, she could not but observe that his most splendid successes were almost invariably failures, if compared with the ideal at which he aimed. His brightest diamonds were the merest pebbles, and felt to be so by himself, in comparison with the inestimable gems which lay hidden beyond his reach. The volume, rich with achievements that had won renown for its author, was yet as melancholy a record as ever mortal hand had penned. It was the sad confession and continual exemplification of the shortcomings of the composite man, the spirit burdened with clay and working in matter, and of the despair that assails the higher nature at finding
Hawthorne—The Birth Mark

itself so miserably thwarted by the earthly part. Perhaps every man of genius in whatever sphere might recognize the image of his own experience in Aylmer’s journal. So deeply did these reflections affect Georgiana that she laid her face upon the open volume and burst into tears. In this situation she was found by her husband.

“It is dangerous to read in a sorcerer’s books,” said he with a smile, though his countenance was uneasy and displeased. “Georgiana, there are pages in that volume which I can scarcely glance over and keep my senses. Take heed lest it prove as detrimental to you.”

“It has made me worship you more than ever,” said she. “Ah, wait for this one success,” rejoined he, “then worship me if you will. I shall deem myself hardly unworthy of it. But come, I have sought you for the luxury of your voice. Sing to me, dearest.”

So she poured out the liquid music of her voice to quench the thirst of his spirit. He then took his leave with a boyish exuberance of gayety, assuring her that her seclusion would endure but a little longer, and that the result was already certain. Scarcely had he departed when Georgiana felt irresistibly impelled to follow him. She had forgotten to inform Aylmer of a symptom which for two or three hours past had begun to excite her attention. It was a sensation in the fatal birthmark, not painful, but which induced a restlessness throughout her system. Hastening after her husband, she intruded for the first time into the laboratory.

The first thing that struck her eye was the furnace, that hot and feverish worker, with the intense glow of its fire, which by the quantities of soot clustered above it seemed to have been burning for ages. There was a distilling apparatus in full operation. Around the room were retorts, tubes, cylinders, crucibles, and other apparatus of chemical research. An electrical machine stood ready for immediate use. The atmosphere felt oppressively close, and was tainted with gaseous odors which had been tormented forth by the processes of science. The severe and homely simplicity of the apartment, with its naked walls and brick pavement, looked strange, accustomed as Georgiana had become to the fantastic elegance of her boudoir. But what chiefly, indeed almost solely, drew her attention, was the aspect of Aylmer himself.

He was pale as death, anxious and absorbed, and hung over the furnace as if it depended upon his utmost watchfulness whether the liquid which it was distilling should be the draught of immortal
happiness or misery. How different from the sanguine and joyous mien that he had assumed for Georgiana's encouragement!

“Carefully now, Aminadab; carefully, thou human machine; carefully, thou man of clay!” muttered Aylmer, more to himself than his assistant. “Now, if there be a thought too much or too little, it is all over.”

“Ho! ho!” mumbled Aminadab. “Look, master! look!”

Aylmer raised his eyes hastily, and at first reddened, then grew paler than ever, on beholding Georgiana. He rushed towards her and seized her arm with a gripe that left the print of his fingers upon it.

“Why do you come hither? Have you no trust in your husband?” cried he, impetuously. “Would you throw the blight of that fatal birthmark over my labors? It is not well done. Go, prying woman, go!”

“Nay, Aylmer,” said Georgiana with the firmness of which she possessed no stinted endowment, “it is not you that have a right to complain. You mistrust your wife; you have concealed the anxiety with which you watch the development of this experiment. Think not so unworthily of me, my husband. Tell me all the risk we run, and fear not that I shall shrink; for my share in it is far less than your own.”

“No, no, Georgiana!” said Aylmer, impatiently; “it must not be.”

“I submit,” replied she calmly. “And, Aylmer, I shall quaff whatever draught you bring me; but it will be on the same principle that would induce me to take a dose of poison if offered by your hand.”

“My noble wife,” said Aylmer, deeply moved, “I knew not the height and depth of your nature until now. Nothing shall be concealed. Know, then, that this crimson hand, superficial as it seems, has clutched its grasp into your being with a strength of which I had no previous conception. I have already administered agents powerful enough to do aught except to change your entire physical system. Only one thing remains to be tried. If that fail us we are ruined.”

“Why did you hesitate to tell me this?” asked she.

“Because, Georgiana,” said Aylmer, in a low voice, “there is danger.”

“Danger? There is but one danger—that this horrible stigma shall be left upon my cheek!” cried Georgiana. “Remove it, remove it, whatever be the cost, or we shall both go mad!”
“Heaven knows your words are too true,” said Aylmer, sadly. “And now, dearest, return to your boudoir. In a little while all will be tested.”

He conducted her back and took leave of her with a solemn tenderness which spoke far more than his words how much was now at stake. After his departure Georgiana became rapt in musings. She considered the character of Aylmer, and did it completer justice than at any previous moment. Her heart exulted, while it trembled, at his honorable love—so pure and lofty that it would accept nothing less than perfection nor miserably make itself contented with an earthlier nature than he had dreamed of. She felt how much more precious was such a sentiment than that meaner kind which would have borne with the imperfection for her sake, and have been guilty of treason to holy love by degrading its perfect idea to the level of the actual; and with her whole spirit she prayed that, for a single moment, she might satisfy his highest and deepest conception. Longer than one moment she well knew it could not be; for his spirit was ever on the march, ever ascending, and each instant required something that was beyond the scope of the instant before.

The sound of her husband’s footsteps aroused her. He bore a crystal goblet containing a liquor colorless as water, but bright enough to be the draught of immortality. Aylmer was pale; but it seemed rather the consequence of a highly-wrought state of mind and tension of spirit than of fear or doubt.

“The concoction of the draught has been perfect,” said he, in answer to Georgiana’s look. “Unless all my science have deceived me, it cannot fail.”

“Save on your account, my dearest Aylmer,” observed his wife, “I might wish to put off this birthmark of mortality by relinquishing mortality itself in preference to any other mode. Life is but a sad possession to those who have attained precisely the degree of moral advancement at which I stand. Were I weaker and blinder it might be happiness. Were I stronger, it might be endured hopefully. But, being what I find myself, methinks I am of all mortals the most fit to die.”

“You are fit for heaven without tasting death!” replied her husband “But why do we speak of dying? The draught cannot fail. Behold its effect upon this plant.”

On the window seat there stood a geranium diseased with yellow blotches, which had overspread all its leaves. Aylmer poured a small quantity of the liquid upon the soil in which it grew. In a lit-
The time, when the roots of the plant had taken up the moisture, the
unsightly blotches began to be extinguished in a living verdure.
“There needed no proof,” said Georgiana, quietly. “Give me the
goblet I joyfully stake all upon your word.”
“Drink, then, thou lofty creature!” exclaimed Aylmer, with fer-
vid admiration. “There is no taint of imperfection on thy spirit. Thy
sensible frame, too, shall soon be all perfect.”

She quaffed the liquid and returned the goblet to his hand.
“It is grateful,” said she with a placid smile. “Methinks it is like
water from a heavenly fountain; for it contains I know not what of
unobtrusive fragrance and deliciousness. It allays a feverish thirst
that had parched me for many days. Now, dearest, let me sleep. My
earthly senses are closing over my spirit like the leaves around the
heart of a rose at sunset.”

She spoke the last words with a gentle reluctance, as if it re-
quired almost more energy than she could command to pronounce
the faint and lingering syllables. Scarce had they loitered through
her lips ere she was lost in slumber. Aylmer sat by her side, watch-
ing her aspect with the emotions proper to a man the whole value of
whose existence was involved in the process now to be tested. Min-
gled with this mood, however, was the philosophic investigation
characteristic of the man of science. Not the minutest symptom
escaped him. A heightened flush of the cheek, a slight irregular-
ity of breath, a quiver of the eyelid, a hardly perceptible tremor
through the frame,—such were the details which, as the moments
passed, he wrote down in his folio volume. Intense thought had set
its stamp upon every previous page of that volume, but the thoughts
of years were all concentrated upon the last.

While thus employed, he failed not to gaze often at the fatal
hand, and not without a shudder. Yet once, by a strange and unac-
countable impulse he pressed it with his lips. His spirit recoiled,
however, in the very act, and Georgiana, out of the midst of her
deep sleep, moved uneasily and murmured as if in remonstrance.
Again Aylmer resumed his watch. Nor was it without avail. The
crimson hand, which at first had been strongly visible upon the
marble paleness of Georgiana’s cheek, now grew more faintly out-
lined. She remained not less pale than ever; but the birthmark with
every breath that came and went, lost somewhat of its former dis-
tinctness. Its presence had been awful; its departure was more aw-
ful still. Watch the stain of the rainbow fading out the sky, and you
will know how that mysterious symbol passed away.
“By Heaven! it is well-nigh gone!” said Aylmer to himself, in almost irrepressible ecstasy. “I can scarcely trace it now. Success! success! And now it is like the faintest rose color. The lightest flush of blood across her cheek would overcome it. But she is so pale!”

He drew aside the window curtain and suffered the light of natural day to fall into the room and rest upon her cheek. At the same time he heard a gross, hoarse chuckle, which he had long known as his servant Aminadab’s expression of delight.

“Ah, clod! ah, earthly mass!” cried Aylmer, laughing in a sort of frenzy, “you have served me well! Matter and spirit—earth and heaven—have both done their part in this! Laugh, thing of the senses! You have earned the right to laugh.”

These exclamations broke Georgiana’s sleep. She slowly unclosed her eyes and gazed into the mirror which her husband had arranged for that purpose. A faint smile flitted over her lips when she recognized how barely perceptible was now that crimson hand which had once blazed forth with such disastrous brilliancy as to scare away all their happiness. But then her eyes sought Aylmer’s face with a trouble and anxiety that he could by no means account for.

“My poor Aylmer!” murmured she.

“Poor? Nay, richest, happiest, most favored!” exclaimed he. “My peerless bride, it is successful! You are perfect!”

“My poor Aylmer,” she repeated, with a more than human tenderness, “you have aimed loftily; you have done nobly. Do not repent that with so high and pure a feeling, you have rejected the best the earth could offer. Aylmer, dearest Aylmer, I am dying!”

Alas! it was too true! The fatal hand had grappled with the mystery of life, and was the bond by which an angelic spirit kept itself in union with a mortal frame. As the last crimson tint of the birthmark—that sole token of human imperfection—faded from her cheek, the parting breath of the now perfect woman passed into the atmosphere, and her soul, lingering a moment near her husband, took its heavenward flight. Then a hoarse, chuckling laugh was heard again! Thus ever does the gross fatality of earth exult in its invariable triumph over the immortal essence which, in this dim sphere of half development, demands the completeness of a higher state. Yet, had Alymer reached a profounder wisdom, he need not thus have flung away the happiness which would have woven his mortal life of the selfsame texture with the celestial. The momentary circumstance was too strong for him; he failed to look beyond the shadowy scope of Time, and, living once for all in Eternity, to find the perfect Future in the present.
HERMAN MELVILLE (1819-1891) is best known for his novel, Moby Dick (1851), but wrote several stories of a speculative nature, always pitting humankind against natural forces, either through science (as in “The Bell-Tower”) or sheer arrogance, as in Moby Dick or Benito Cereno. His stories also resemble those of Hawthorne in that they attempted to examine the inexplicable and the limits of human ingenuity.
In the south of Europe, nigh a once frescoed capital, now with dank mold cankering its bloom, central in a plain, stands what, at distance, seems the black mossed stump of some immeasurable pine, fallen, in forgotten days, with Anak and the Titan.

As all along where the pine tree falls, its dissolution leaves a mossy mound—last-flung shadow of the perished trunk; never lengthening, never lessening; unsubject to the fleet falsities of the sun; shade immutable, and true gauge which cometh by prostration—so westward from what seems the stump, one steadfast spear of lichened ruin veins the plain.

From that treetop, what birded chimes of silver throats had rung. A stone pine, a metallic aviary in its crown: the Bell-Tower, built by the great mechanician, the unblest foundling, Bannadonna.

Like Babel’s, its base was laid in a high hour of renovated earth, following the second deluge, when the waters of the Dark Ages had dried up and once more the green appeared. No wonder that, after so long and deep submersion, the jubilant expectation of the race should, as with Noah’s sons, soar into Shinar aspiration.

In firm resolve, no man in Europe at that period went beyond Bannadonna. Enriched through commerce with the Levant, the state in which he lived voted to have the noblest Bell-Tower in Italy. His repute assigned him to be architect.

Stone by stone, month by month, the tower rose. Higher, higher, snail-like in pace, but torch or rocket in its pride.

After the masons would depart, the builder, standing alone upon its ever-ascending summit at close of every day, saw that he overtopped still higher walls and trees. He would tarry till a late hour there, wrapped in schemes of other and still loftier piles. Those who of saints’ days thronged the spot—hanging to the rude poles of scaffolding like sailors on yards or bees on boughs, unmindful
of lime and dust, and falling chips of stone—their homage not the less inspired him to self-esteem.

At length the holiday of the Tower came. To the sound of viols, the climax-stone slowly rose in air, and, amid the firing of ordnance, was laid by Bannadonna’s hands upon the final course. Then mounting it, he stood erect, alone, with folded arms, gazing upon the white summits of blue inland Alps, and whiter crests of bluer Alps offshore—sights invisible from the plain. Invisible, too, from thence was that eye he turned below, when, like the cannon booms, came up to him the people’s combustions of applause.

That which stirred them so was seeing with what serenity the builder stood three hundred feet in air, upon an unrailed perch. This none but he durst do. But his periodic standing upon the pile, in each stage of its growth—such discipline had its last result.

Little remained now but the bells. These, in all respects, must correspond with their receptacle.

The minor ones were prosperously cast. A highly enriched one followed, of a singular make, intended for suspension in a manner before unknown. The purpose of this bell, its rotary motion and connection with the clockwork, also executed at the time, will, in the sequel, receive mention.

In the one erection, bell-tower and clock-tower were united, though, before that period, such structures had commonly been built distinct; as the Campanile and Torre del Orologio of St. Mark to this day attest.

But it was upon the great state bell that the founder lavished his more daring skill. In vain did some of the less elated magistrates here caution him, saying that though truly the tower was titanic, yet limit should be set to the dependent weight of its swaying masses. But, undeterred, he prepared his mammoth mold, dented with mythological devices; kindled his fires of balsamic firs; melted his tin and copper, and, throwing in much plate contributed by the public spirit of the nobles, let loose the tide.

The unleashed metals bayed like hounds. The workmen shrunk. Through their fright, fatal harm to the bell was dreaded. Fearless as Shadrach, Bannadonna, rushing through the glow, smote the chief culprit with his ponderous ladle. From the smitten part, a splinter was dashed into the seething mass, and at once was melted in.

Next day a portion of the work was heedfully uncovered. All seemed right. Upon the third morning, with equal satisfaction, it was bared still lower. At length, like some old Theban king, the whole cooled casting was disinterred. All was fair except in one
strange spot. But as he suffered no one to attend him in these inspections, he concealed the blemish by some preparation which none knew better to devise.

The casting of such a mass was deemed no small triumph for the caster; one, too, in which the state might not scorn to share. The homicide was overlooked. By the charitable that deed was but imputed to sudden transports of esthetic passion, not to any flagitious quality. A kick from an Arabian charger; not sign of vice, but blood.

His felony remitted by the judge, absolution given him by the priest, what more could even a sickly conscience have desired.

Honoring the tower and its builder with another holiday, the republic witnessed the hoisting of the bells and clockwork amid shows and pomps superior to the former.

Some months of more than usual solitude on Bannadonna’s part ensued. It was not unknown that he was engaged upon something for the belfry, intended to complete it and surpass all that had gone before. Most people imagined that the design would involve a casting like the bells. But those who thought they had some further insight would shake their heads, with hints that not for nothing did the mechanician keep so secret. Meantime, his seclusion failed not to invest his work with more or less of that sort of mystery pertaining to the forbidden.

Erelong he had a heavy object hoisted to the belfry, wrapped in a dark sack or cloak—a procedure sometimes had in the case of an elaborate piece of sculpture, or statue, which, being intended to grace the front of a new edifice, the architect does not desire exposed to critical eyes till set up, finished, in its appointed place. Such was the impression now. But, as the object rose, a statuary present observed, or thought he did, that it was not entirely rigid, but was, in a manner, pliant. At last, when the hidden thing had attained its final height, and, obscurely seen from below, seemed almost of itself to step into the belfry, as if with little assistance from the crane, a shrewd old blacksmith present ventured the suspicion that it was but a living man. This supposition was thought a foolish one, while the general interest failed not to augment.

Not without demur from Bannadonna, the chief magistrate of the town, with an associate—both elderly men—followed what seemed the image up the tower. But, arrived at the belfry, they had little recompense. Plausibly entrenching himself behind the conceded mysteries of his art, the mechanician withheld present explanation. The magistrates glanced toward the cloaked object,
which, to their surprise, seemed now to have changed its attitude, or else had before been more perplexingly concealed by the violent muffling action of the wind without. It seemed now seated upon some sort of frame, or chair, contained within the domino. They observed that nigh the top, in a sort of square, the web of the cloth, either from accident or design, had its warp partly withdrawn, and the cross threads plucked out here and there, so as to form a sort of woven grating. Whether it were the low wind or no, stealing through the stone latticework, or only their own perturbed imaginations, is uncertain, but they thought they discerned a slight sort of fitful, springlike motion in the domino. Nothing, however incidental or insignificant, escaped their uneasy eyes. Among other things, they pried out, in a corner, an earthen cup, partly corroded and partly encrusted, and one whispered to the other that this cup was just such a one as might, in mockery, be offered to the lips of some brazen statue, or, perhaps, still worse.

But, being questioned, the mechanician said that the cup was simply used in his founder’s business, and described the purpose—in short, a cup to test the condition of metals in fusion. He added that it had got into the belfry by the merest chance.

Again and again they gazed at the domino, as at some suspicious incognito at a Venetian mask. All sorts of vague apprehensions stirred them. They even dreaded lest, when they should descend, the mechanician, though without a flesh-and-blood companion, for all that, would not be left alone.

Affecting some merriment at their disquietude, he begged to relieve them, by extending a coarse sheet of workman’s canvas between them and the object.

Meantime he sought to interest them in his other work, nor, now that the domino was out of sight, did they long remain insensitive to the artistic wonders lying round them—wonders hitherto beheld but in their unfinished state, because, since hoisting the bells, none but the caster had entered within the belfry. It was one trait of his, that, even in details, he would not let another do what he could, without too great loss of time, accomplish for himself. So, for several preceding weeks, whatever hours were unemployed in his secret design had been devoted to elaborating the figures on the bells.

The clock bell, in particular, now drew attention. Under a patient chisel, the latent beauty of its enrichments, before obscured by the cloudings incident to casting, that beauty in its shyest grace, was now revealed. Round and round the bell, twelve figures of gay
girls, garlanded, hand-in-hand, danced in a choral ring the embodied hours.

“Bannadonna,” said the chief, “this bell excels all else. No added touch could here improve. Hark!” hearing a sound, “was that the wind?”

“The wind, Excellenza,” was the light response. “But the figures, they are not yet without their faults. They need some touches yet. When those are given, and the—block yonder,” pointing towards the canvas screen, “when Haman there, as I merrily call him—he, I mean—when Haman is fixed on this, his lofty tree, then, gentlemen, will I be most happy to receive you here again.”

The equivocal reference to the object caused some return of restlessness. However, on their part, the visitors forbore further allusion to it, unwilling, perhaps, to let the foundling see how easily it lay within his plebeian art to stir the placid dignity of nobles.

“Well, Bannadonna,” said the chief, “how long ere you are ready to set the clock going, so that the hour shall be sounded? Our interest in you, not less than in the work itself, makes us anxious to be assured of your success. The people, too—why, they are shouting now, say the exact hour when you will be ready.”

“Tomorrow, Excellenza, if you listen for it—or should you not, all the same—strange music will be heard. The stroke of one shall be the first from yonder bell,” pointing to the bell adorned with girls and garlands, “that stroke shall fall there, where the hand of Una clasps Dua’s. The stroke of one shall sever that loved clasp. Tomorrow, then, at one o’clock, as struck here, precisely here,” advancing and placing his finger upon the clasp, “the poor mechanic will be most happy once more to give you liege audience, in this his littered shop. Farewell till then, illustrious magnificoes, and hark ye for your vassal’s stroke.”

His still, Vulcanic face hiding its burning brightness like a forge, he moved with ostentatious deference towards the scuttle, as if so far to escort their exit. But the junior magistrate, a kind-hearted man, troubled at what seemed to him a certain sardonic disdain lurking beneath the foundling’s humble mien, and in Christian sympathy more distressed at it on his account than on his own, dimly surmising what might be the final fate of such a cynic solitaire, nor perhaps uninfluenced by the general strangeness of surrounding things, this good magistrate had glanced sadly, sideways from the speaker, and thereupon his foreboding eye had started at the expression of the unchanging face of the Hour Una.
“How is this, Bannadonna,” he lowly asked, “Una looks unlike her sisters.”

“In Christ’s name, Bannadonna,” impulsively broke in the chief, his attention for the first attracted to the figure by his associate’s remark. “Una’s face looks just like that of Deborah, the prophetess, as painted by the Florentine, Del Fonca.”

“Surely, Bannadonna,” lowly resumed the milder magistrate, “you meant the twelve should wear the same jocundly abandoned air. But see, the smile of Una seems but a fatal one. ‘Tis different.”

While his mild associate was speaking, the chief glanced inquiringly from him to the caster, as if anxious to mark how the discrepancy would be accounted for. As the chief stood, his advanced foot was on the scuttle’s curb.

Bannadonna spoke:

“Excellenza, now that, following your keener eye, I glance upon the face of Una, I do, indeed perceive some little variance. But look all round the bell, and you will find no two faces entirely correspond. Because there is a law in art—but the cold wind is rising more; these lattices are but a poor defense. Suffer me, magnificoes, to conduct you at least partly on your way. Those in whose well-being there is a public stake, should be heedfully attended.”

“Touching the look of Una, you were saying, Bannadonna, that there was a certain law in art,” observed the chief, as the three now descended the stone shaft, “pray, tell me, then—”

“Pardon; another time, Excellenza—the tower is damp.”

“Nay, I must rest, and hear it now. Here,—here is a wide landing, and through this leeward slit, no wind, but ample light. Tell us of your law, and at large.”

“Since, Excellenza, you insist, know that there is a law in art which bars the possibility of duplicates. Some years ago, you may remember, I graved a small seal for your republic, bearing, for its chief device, the head of your own ancestor, its illustrious founder. It becoming necessary, for the customs’ use, to have innumerable impressions for bales and boxes, I graved an entire plate, containing one hundred of the seals. Now, though, indeed, my object was to have those hundred heads identical, and though, I dare say, people think them so, yet, upon closely scanning an uncut impression from the plate, no two of those five-score faces, side by side, will be found alike. Gravity is the air of all, but diversified in all. In some, benevolent; in some, ambiguous; in two or three, to a close scrutiny, all but incipiently malign, the variation of less than a hair’s breadth in the linear shadings round the mouth sufficing to all this.
Now, Excellenza, transmute that general gravity into joyousness, and subject it to twelve of those variations I have described, and tell me, will you not have my hours here, and Una one of them? But I like—"

"Hark! is that—a footfall above?"

"Mortar, Excellenza; sometimes it drops to the belfry floor from the arch where the stonework was left undressed. I must have it seen to. As I was about to say: for one, I like this law forbidding duplicates. It evokes fine personalities. Yes, Excellenza, that strange, and—to you—uncertain smile, and those forelooking eyes of Una, suit Bannadonna very well."

"Hark!—sure we left no soul above?"

"No soul, Excellenza, rest assured, no soul.—Again the mortar."

"It fell not while we were there."

"Ah, in your presence, it better knew its place, Excellenza," blandly bowed Bannadonna.

"But Una," said the milder magistrate, "she seemed intently gazing on you; one would have almost sworn that she picked you out from among us three."

"If she did, possibly it might have been her finer apprehension, Excellenza."

"How, Bannadonna? I do not understand you."

"No consequence, no consequence, Excellenza—but the shifted wind is blowing through the slit. Suffer me to escort you on, and then, pardon, but the toiler must to his tools."

"It may be foolish, signor," and the milder magistrate, as, from the third landing, the two now went down unescorted, "but, somehow, our great mechanician moves me strangely. Why, just now, when he so superciliously replied, his walk seemed Sisera's, God's vain foe, in Del Fonca's painting. And that young, sculptured Deborah, too. Aye, and that—"

"Tush, tush, signor!" returned the chief. "A passing whim. Deborah?—Where's Jael, pray?"

"Ah," said the other, as they now stepped upon the sod, "ah, signor, I see you leave your fears behind you with the chill and gloom; but mine, even in this sunny air, remain. Hark!"

It was a sound from just within the tower door, whence they had emerged. Turning, they saw it closed.

"He has slipped down and barred us out," smiled the chief; "but it is his custom."
Proclamation was now made that the next day, at one hour after meridian, the clock would strike, and—thanks to the mechanic’s powerful art—with unusual accompaniments. But what those should be, none as yet could say. The announcement was received with cheers.

By the looser sort, who encamped about the tower all night, lights were seen gleaming through the topmost blindwork, only disappearing with the morning sun. Strange sounds, too, were heard, or were thought to be, by those whom anxious watching might not have left mentally undisturbed—sounds, not only of some ringing implement, but also, so they said, half-suppressed screams and plainings, such as might have issued from some ghostly engine overplied.

Slowly the day drew on, part of the concourse chasing the weary time with songs and games, till, at last, the great blurred sun rolled, like a football, against the plain.

At noon, the nobility and principal citizens came from the town in cavalcade, a guard of soldiers, also, with music, the more to honor the occasion.

Only one hour more. Impatience grew. Watches were held in hands of feverish men, who stood, now scrutinizing their small dial-plates, and then, with neck thrown back, gazing toward the belfry as if the eve might foretell that which could only be made sensible to the ear, for, as yet, there was no dial to the tower clock.

The hour hands of a thousand watches now verged within a hair’s breadth of the figure 1. A silence, as of the expectations of some Shiloh, pervaded the swarming plain. Suddenly a dull, mangled sound, naught ringing in it, scarcely audible, indeed, to the outer circles of the people—that dull sound dropped heavily from the belfry. At the same moment, each man stared at his neighbor blankly. All watches were upheld. All hour hands were at—had passed—the figure 1. No bell stroke from the tower. The multitude became tumultuous.

Waiting a few moments, the chief magistrate, commanding silence, hailed the belfry to know what thing unforeseen had happened there.

No response.

He hailed again and yet again.

All continued hushed.

By his order, the soldiers burst in the tower door, when, stationing guards to defend it from the now surging mob, the chief, accompanied by his former associate, climbed the winding stairs.
Halfway up, they stopped to listen. No sound. Mounting faster, they reached the belfry, but, at the threshold, started at the spectacle disclosed. A spaniel, which, unbeknown to them, had followed them thus far, stood shivering as before some unknown monster in a brake, or, rather, as if it snuffed footsteps leading to some other world.

Bannadonna lay, prostrate and bleeding, at the base of the bell which was adorned with girls and garlands. He lay at the feet of the hour Una, his head coinciding, in a vertical line, with her left hand, clasped by the hour Dua. With downcast face impending over him, like Jael over nailed Sisera in the tent, was the domino; now no more becloaked.

It had limbs, and seemed clad in a scaly mail, lustrous as a dragon-beetle's. It was manacled, and its clubbed arms were uplifted, as if, with its manacles, once more to smite its already smitten victim. One advanced foot of it was inserted beneath the dead body, as if in the act of spurning it.

Uncertainty falls on what now followed.

It were but natural to suppose that the magistrates would, at first, shrink from immediate personal contact with what they saw. At the least, for a time, they would stand in involuntary doubt, it may be, in more or less horrified alarm. Certain it is that an arquebuss was called for from below. And some add that its report, followed by a fierce whiz, as of the sudden snapping of a mainspring, with a steely din, as if a stack of sword blades should be dashed upon a pavement; these blended sounds came ringing to the plain, attracting every eye far upward to the belfry, whence, through the latticework, thin wreaths of smoke were curling.

Some averred that it was the spaniel, gone mad by fear, which was shot. This, others denied. True it was, the spaniel never more was seen; and, probably for some unknown reason, it shared the burial now to be related of the domino. For, whatever the preceding circumstances may have been, the first instinctive panic over, or else all ground of reasonable fear removed, the two magistrates, by themselves, quickly re-hooded the figure in the dropped cloak wherein it had been hoisted. The same night, it was secretly lowered to the ground, smuggled to the beach, pulled far out to sea, and sunk. Nor to any after urgency, even in free convivial hours, would the twain ever disclose the full secrets of the belfry.

From the mystery unavoidably investing it, the popular solution of the foundling's fate involved more or less of supernatural agency. But some few less unscientific minds pretended to find little diffi-

47
culty in otherwise accounting for it. In the chain of circumstantial inferences drawn, there may or may not have been some absent or defective links. But, as the explanation in question is the only one which tradition has explicitly preserved, in dearth of better, it will here be given. But, in the first place, it is requisite to present the supposition entertained as to the entire motive and mode, with their origin, of the secret design of Bannadonna, the minds above-mentioned assuming to penetrate as well into his soul as into the event. The disclosure will indirectly involve reference to peculiar matters, none of the clearest, beyond the immediate subject.

At that period, no large bell was made to sound otherwise than as at present, by agitation of a tongue within by means of ropes, or percussion from without, either from cumbrous machinery, or stalwart watchmen, armed with heavy hammers, stationed in the belfry or in sentry boxes on the open roof, according as the bell was sheltered or exposed.

It was from observing these exposed bells, with their watchmen, that the foundling, as was opined, derived the first suggestion of his scheme. Perched on a great mast or spire, the human figure, viewed from below, undergoes such a reduction in its apparent size as to obliterate its intelligent features. It evinces no personality. Instead of bespeaking volition, its gestures rather resemble the automatic ones of the arms of a telegraph.

Musing, therefore, upon the purely Punchinello aspect of the human figure thus beheld, it had indirectly occurred to Bannadonna to devise some metallic agent which should strike the hour with its mechanic hand, with even greater precision than the vital one. And, moreover, as the vital watchman on the roof, sallying from his retreat at the given periods, walked to the bell with uplifted mace to smite it, Bannadonna had resolved that his invention should likewise possess the power of locomotion, and, along with that, the appearance, at least, of intelligence and will.

If the conjectures of those who claimed acquaintance with the intent of Bannadonna be thus far correct, no unenterprising spirit could have been his. But they stopped not here; intimating that though, indeed, his design had, in the first place, been prompted by the sight of the watchman, and confined to the devising of a subtle substitute for him, yet, as is not seldom the case with projectors, by insensible gradations proceeding from comparatively pigmy aims to titanic ones, the original scheme had, in its anticipated eventualities, at last attained to an unheard-of degree of daring. He still bent his efforts upon the locomotive figure for the belfry, but
only as a partial type of an ulterior creature, a sort of elephantine helot, adapted to further, in a degree scarcely to be imagined, the universal conveniences and glories of humanity; supplying nothing less than a supplement to the Six Days’ Work; stocking the earth with a new serf, more useful than the ox, swifter than the dolphin, stronger than the lion, more cunning than the ape, for industry an ant, more fiery than serpents, and yet, in patience, another ass. All excellences of all God-made creatures which served man were here to receive advancement, and then to be combined in one. Talus was to have been the all-accomplished helot’s name. Talus, iron slave to Bannadonna, and, through him, to man.

Here, it might well be thought that, were these last conjectures as to the foundling’s secrets not erroneous, then must he have been hopelessly infected with the craziest chimeras of his age; far outgoing Albert Magus and Cornelius Agrippa. But the contrary was averred. However marvelous his design, however apparently transcending not alone the bounds of human invention, but those of divine creation, yet the proposed means to be employed were alleged to have been confined within the sober forms of sober reason. It was affirmed that, to a degree of more than skeptic scorn, Bannadonna had been without sympathy for any of the vainglorious irrationalities of his time. For example, he had not concluded, with the visionaries among the metaphysicians, that between the finer mechanic forces and the ruder animal vitality some germ of correspondence might prove discoverable. As little did his scheme partake of the enthusiasm of some natural philosophers, who hoped, by physiological and chemical inductions, to arrive at a knowledge of the source of life, and so qualify themselves to manufacture and improve upon it. Much less had he aught in common with the tribe of alchemists, who sought by a species of incantations to evoke some surprising vitality from the laboratory. Neither had he imagined, with certain sanguine theosophists, that, by faithful adoration of the Highest, unheard-of powers would be vouchsafed to man. A practical materialist, what Bannadonna had aimed at was to have been reached, not by logic, not by crucible, not by conjuration, not by altars, but by plain vise-bench and hammer. In short, to solve nature, to steal into her, to intrigue beyond her, to procure someone else to bind her to his hand—these, one and all, had not been his objects, but, asking no favors from any element or any being, of himself to rival her, outstrip her, and rule her. He stooped to conquer. With him, common sense was theurgy; machinery, miracle; Prometheus, the heroic name for machinist; man, the true God.
Nevertheless, in his initial step, so far as the experimental automaton for the belfry was concerned, he allowed fancy some little play, or, perhaps, what seemed his fancifulness was but his utilitarian ambition collaterally extended. In figure, the creature for the belfry should not be likened after the human pattern, nor any animal one, nor after the ideals, however wild, of ancient fable, but equally in aspect as in organism be an original production—the more terrible to behold, the better.

Such, then, were the suppositions as to the present scheme, and the reserved intent. How, at the very threshold, so unlooked-for a catastrophe overturned all, or rather, what was the conjecture here, is now to be set forth.

It was thought that on the day preceding the fatality, his visitors having left him, Bannadonna had unpacked the belfry image, adjusted it, and placed it in the retreat provided—a sort of sentry box in one corner of the belfry; in short, throughout the night, and for some part of the ensuing morning, he had been engaged in arranging everything connected with the domino: the issuing from the sentry box each sixty minutes; sliding along a grooved way, like a railway; advancing to the clock bell with uplifted manacles; striking it at one of the twelve junctions of the four-and-twenty hands; then wheeling, circling the bell, and retiring to its post, there to bide for another sixty minutes, when the same process was to be repeated; the bell, by a cunning mechanism, meantime turning on its vertical axis, so as to present, to the descending mace, the clasped hands of the next two figures, when it would strike two, three, and so on, to the end. The musical metal in this time bell being so managed in the fusion, by some art perishing with its originator, that each of the clasps of the four-and-twenty hands should give forth its own peculiar resonance when parted.

But on the magic metal, the magic and metallic stranger never struck but that one stroke, drove but that one nail, served but that one clasp, by which Bannadonna clung to his ambitious life. For, after winding up the creature in the sentry box, so that, for the present, skipping the intervening hours, it should not emerge till the hour of one, but should then infallibly emerge, and, after deftly oiling the grooves whereon it was to slide, it was surmised that the mechanician must then have hurried to the bell, to give his final touches to its sculpture. True artist, he here became absorbed, and absorption still further intensified, it may be, by his striving to abate that strange look of Una, which, though, before others, he
